Interim Report 2014

TECHNOLOGY AND RESOURCES LINKS

CHARACTERISTICS OF THE GROWTH ENTERPRISE MARKET (THE “GEM”) OF THE STOCK EXCHANGE OF HONG KONG LIMITED (THE “STOCK EXCHANGE”)

GEM has been positioned as a market designed to accommodate companies to which a higher investment risk may be attached than other companies listed on the Stock Exchange. Prospective investors should be aware of the potential risks of investing in such companies and should make the decision to invest only after due and careful consideration. The greater risk profile and other characteristics of GEM mean that it is a market more suited to professional and other sophisticated investors.

Given the emerging nature of companies listed on GEM, there is a risk that securities traded on GEM may be more susceptible to high market volatility than securities traded on the Main Board of the Stock Exchange and no assurance is given that there will be a liquid market in the securities traded on GEM.

Hong Kong Exchanges and Clearing Limited and the Stock Exchange take no responsibility for the contents of this report, make no representation as to its accuracy or completeness and expressly disclaim any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this report.

This report, for which the directors (the “Directors”) of China Ground Source Energy Industry Group Limited (the “Company”) collectively and individually accept full responsibility, includes particulars given in compliance with the Rules Governing the Listing of Securities on the Growth Enterprise Market of The Stock Exchange of Hong Kong Limited for the purpose of giving information with regard to the Company. The Directors, having made all reasonable enquiries, confirm that to the best of their knowledge and belief the information contained in this report is accurate and complete in all material respects and not misleading or deceptive, and there are no other matters the omission of which would make any statement herein or this report misleading.

HIGHLIGHTS

Revenue for the six months ended 30 June 2014 (the "Review Period") amounted to approximately HK\$136,277,000.

Net profit after tax of the Group for the Review Period amounted to approximately HK\$8,903,000.

No dividend was declared for the Review Period.

FINANCIAL REVIEW

The following table provides a brief summary of the financial results of China Ground Source Energy Industry Group Limited (the "Company") and its subsidiaries (collectively the "Group"). For more detailed information, please refer to the unaudited consolidated financial statements for the Review Period and the six months ended 30 June 2013.

	Three months ended		Six months ended	
	30 June		30 June

Profit attributable to owners of the Company	2,146	27,626	2,803	29,132

During the Review Period, the Group's revenue amounted to approximately HK\$134,288,000 which was mainly contributed by shallow ground source energy utilisation business as compared with that of approximately HK\$129,187,000 for the corresponding period last year. The revenue increased by approximately HK\$5,101,000 as compared with that of corresponding period last year. The increase in revenue was mainly attributable to the fact that, the Group provided to its existing customers with free upgrade and transformation of the geothermal energy collection equipment last year in order to meet the new standards of "The Technical Code for Single Well Circulation Heat Exchange Geothermal Energy Collection Well" which received good response and increased customers' loyalty to the enterprise. Hence, the Group secured more projects and completed by stage in the period under review. The Group's gross profit margin decreased from 55.5% in last corresponding period to 43.1% in the current period, that was mainly due to the expansion of business in districts other than Beijing with more competitive prices which caused the decrease in gross profit margin.

Other income increased from approximately HK\$4,363,000 in the corresponding period last year to approximately HK\$51,450,000 for the six months ended 30 June 2014. The increase was mainly attributable to the one-off government incentive for development of the integration of heating and cooling emerging industry and the increase in interest income due to the increased bank balances for the Review Period.

Selling and distribution expenses amounted to approximately HK\$13,170,000 and HK\$32,602,000 for the six months ended 30 June 2014 and 2013 respectively. In order to ensure the completed projects to meet the new standards, the Group committed to provide an one-off free modification, installation and testing of the customers' shallow ground source energy collection equipment so as to optimizing/improving of the customers' shallow ground source energy utilisation system during the six months ended 30 June 2013, thereby enhancing the promotional effect. Excluding this one-off impact in last year, thus the selling and distribution expenses dropped in this Review Period.

During the Review Period, administrative expenses increased by approximately HK\$3,472,000 or 7.9% as compared with that of six months ended 30 June 2013. Administrative expenses increased mainly due to the increase in staff costs and depreciation expenses arising from the Beijing office which was acquired at the end of last year.

During the Review Period, 恒有源科技發展集團有限公司, a subsidiary of the Group, completed the acquisition of the remaining 62.03% of the issued share capital of 恒有源投資管理有限公司 (formerly as an associate of the Group) from 北京市四博連通用機械新技術公司, a related company of the Group, this led to the “loss on deemed disposal of an associate” amounted to approximately HK\$5,877,000.

Finance costs amounted to HK\$27,060,000 for the six months ended 30 June 2014 as compared with approximately HK\$2,593,000 for the last corresponding period. The increase in finance costs was mainly due to the increase in interest expense on bank loans.

Profit attributable to owners of the Company was approximately HK\$2,803,000 for the six months ended 30 June 2014 (2013: approximately HK\$29,132,000). The decrease in profit attributable to owners was due to the decrease in gross profit and increase in finance costs.

Order Book

As at 30 June 2014, the Group has contracts on hand of approximately HK\$311,533,000.

Investment Properties

The Group’s investment properties as at 30 June 2014 were valued at approximately HK\$307,175,000. This resulted in an increase in fair value of investment properties of approximately HK\$6,481,000 (2013: approximately HK\$7,757,000) which was recognised directly in income statement for the Review Period.

Liquidity, Financial Resources and Capital Structure

Net current assets of the Group as at 30 June 2014 was approximately HK\$870,669,000 (31 December 2013: approximately HK\$938,779,000). As at 30 June 2014, the Group had cash and bank balances of approximately HK\$530,539,000 (31 December 2013: approximately HK\$541,930,000). Cash shown on our statement of financial position include funds available for general corporate purposes.

Non-controlling interest amounted to approximately HK\$42,625,000 which mainly represents the interest attributable to non-controlling shareholders of the Group’s subsidiaries in the PRC.

Charges on asset

As at 30 June 2014, no Group’s asset has been charged.

Gearing Ratio

The gearing ratio of the Group was maintained at 31.0% as at 30 June 2014 (31 December 2013: 31.2%).

Foreign Exchange Exposure

The Group continues to adopt a conservative treasury policy with all bank deposits being kept in either Hong Kong dollars, or in local currencies of the operating subsidiaries, keeping a minimum exposure to foreign exchange risks.

Contingent Liabilities

As at 30 June 2014, the Group had no material contingent liabilities (31 December 2013: Nil).

Employees

As at 30 June 2014, the Group has approximately 540 employees in total (31 December 2013: approximately 510). The remuneration package of the employees is determined with reference to their performance, experience and their positions, duties and responsibilities in the Group.

BUSINESS REVIEW AND PROSPECTS

Under the Beijing-Hong Kong integrated management framework, the Group has developed into an enterprise by using accelerated development to solve problems arising from the development. In the last decade, the headquarter in Beijing named Ever Source Science and Technology Development Group Co., Ltd. ("HYY") of China Ground Source Energy Industry Group Ltd. (HK Stock Code 8128, referred as CGS) under the hierarchy of China Energy Conservation and Environmental Protection Group has been one of the emerging enterprises engaged in the exploration and utilization of shallow ground source energy (heat). Combining its indigenous technology "Single-Well Heat Exchange Circulation for Ground Source Energy Collection" and the mature heat pump technology, it has provided heating in winter and cooling in summer to buildings of over 10,000,000 m² which proved that shallow ground source energy (heat) has successfully substituted the traditional combustion heating (which features combustion, emission and pollution) for buildings and has developed to be the emerging industrial of Integrated Heating and Cooling System with ground source energy which is free of combustion.

I. Introduction of Combustion-free Integrated Heating and Cooling System with ground source energy

(1) *Shallow ground source energy (heat)*

Shallow ground source energy (heat) normally refers to the low-grade heat of 25°C or less (according to the relevant laws and regulations, geothermal energy of above 25°C is the mineral resources of the country) which is mainly stored in the rock and soil of the land, the river water, the lake water, the sea water, the residual heat water, the water, the waste heat water.

(2) *The industrialization development of the indigenous technology*

The Single-Well Heat Exchange Circulation for Ground Source Energy Collection technology of Combustion-free Integrated Heating and Cooling System has realized the industrialization development. It is applicable under any geological conditions, free of pollution and with cost equivalent to traditional heating in exploration of shallow ground source energy stored in the soil and rock to be the substitute energy of heating for buildings. Combined with the mature heat pump technology, it can extract massive amount of free natural energy in dynamic equilibrium at cost of very small amount of electricity and it is renewable and free of pollution and emission. Hence, graded heating energy utilization and heating provision to buildings at cost equivalent to traditional heating can be achieved.

II. The advantages of Combustion-free Integrated Heating and Cooling System

(1) *Environmental advantages*

Combustion-free Integrated Heating and Cooling System has achieved ecological civilization construction and further accelerated the transformation and upgrade of the traditional industries and gradually led to a new way for China to cure haze problem.

An important cause to haze pollution is the low-altitude emission discharged by enormous fuel-combustion for heating. The emission containing harmful gas, dirt and vast heat when encountering typical weather condition transforms into haze. Using Combustion-free Integrated Heating and Cooling System for heating provision to buildings can achieve no pollution and emission for the regions during the whole heating process. It can improve the economic development and the people's quality of life while addressing the ecological problems. In addition, It can eliminate the conditions of haze produced from the source so as to pursue harmony between human and nature.

(2) *Technical advantages*

The Single-Well Heat Exchange Circulation for Ground Source Energy Collection is the core technology of Combustion-free Integrated Heating and Cooling System. The technology patent is wholly owned by HYY. The characteristic of the industrialization is the strong designability of the system. At the premise of no pollution, no water loss and no potential danger to geological situation, it realizes the extraction of shallow ground source energy under different geological conditions at cost equivalent to the traditional heating.

(3) *Cost advantages*

a. *Initial investment cost advantages*

The initial investment cost of Combustion-free Integrated Heating and Cooling System with ground source energy is equivalent to that of conventional air-conditioning system. Without incurring additional heating cost to buildings, it can achieve three functions, i.e. provision of heating, cooling and domestic water.

b. *Operating cost advantages*

Combustion-free Integrated Heating and Cooling System with ground source energy as alternative energy for heating, its operating cost is equivalent to 25% of the cost of traditional electric boilers. When providing cooling, it can save 15-20% energy as compared to the conventional central air-conditioner. Besides, free domestic water can be obtained during the heat re-collection process. When boiling of domestic water, only 12kWh electricity will be consumed for every ton of domestic water.

(4) *Safe operation advantages*

As compared with the traditional heating by coal, oil, gas which required for fire and explosion prevention. Combustion-free Integrated Heating and Cooling System with ground source energy only need to ensure the electricity safety which is easy for operation, safe and reliable.

(5) *Standardization advantages*

To realize the marketization development of the emerging industrial of Integrated Heating and Cooling System with ground source energy, there must be standards to follow. The Beijing local standard "The Technical Code for Single Well Circulation Heat Exchange Geothermal Energy Collection" (DB11/T935-2012) was implemented on 1 April 2013 which marked the industrialization development of the indigenous technology.

HYY has passed the rigorous inspection and obtained several international standard certifications, such as ISO9001, ISO14001, OHSAS18001 etc.

(6) *Main industrial chain advantages*

Combustion-free Integrated Heating and Cooling System with ground source energy is a development mode pursuant by HYY for group development & emerging industrial development with professional support. The Group inherited the fine tradition of the traditional heating industry by adoption of the products production suitable for energy regions to secure the promotion of the regional applications and by adoption of the regional service assurance system to ensure safe regional heating operation. By possession of the main industrial chain featuring the research and development, ground source energy collection, system design, equipment manufacturing, engineering installation, operation and maintenance assurance, a total solution for combustion-free heating supply of Integrated Heating and Cooling with ground source energy can be provided to the customers.

(7) *Advantages of products series under industrialization development*

- a. HYY 5-900MW Dispersed Ground Source Station for Cooling/Heating, being heating station for new towns and cities, can achieve heating, cooling and domestic water provision to regional constructions of 100,000 m² – 15,000,000 m² by Combustion-free Integrated Heating and Cooling System with ground source energy.
- b. HYY Ground Source Heat Pump System, being self-supply heating system, for single building or building blocks which can provide heating, cooling and domestic water for building area of 2,000 m² – 500,000 m².
- c. HYY Ground Source Heating Devices capable to serve 50 m² – 2,000 m² rural household by provision of heating, cooling and domestic water which can solve the different heating needs in a low energy consumption manner.

III. Emerging Industrial of Combustion-free Integrated Heating and Cooling System with ground source energy made substantial progress

Combustion-free Integrated Heating and Cooling System with ground source energy has been promoted nationally and covered over 10 million m² which is equivalent to construction of a 780MW Dispersed Ground Source Station for Cooling/Heating. Compared with heating by electric boiler, it can save 975 million kWh electricity per annum (0.37 million tons standard coal), 0.943 million tons/year CO₂ reduction, 8,900 tons/year SO₂ reduction, 5,900 tons/year NO_x reduction, 16,000 tons/year particles reduction, 5.02 billion m³ smoke reduction, equivalent to reducing construction of a 580MW power plant, saving investment of about 2.3 billion yuan.

During the review period, the promotion and development of the utilization of shallow ground source energy by the Group has well received attention by the community and the experts and the continuous support from the leaders. In the afternoon of 3rd June, State Councillor, Mr. Wangyong visited our project site in person and gave high comments to the projects of combustion-free heating provision to buildings by shallow ground source energy. State-owned Assets Supervision and Administration Commission of State Council, National Energy Administration and other governmental departments joined the Group's conferences for special topic to further explore the emerging industrial of combustion-free Integrated Heating and Cooling System with ground source energy from the perspectives of policy and market support.

With the continuous improvement of the Group's business models and main industrial chain, the Group further enhanced its core competitiveness. It is believed that, with the unremitting efforts of the management team and the solid foundation, the Group's operating results will be further improved.

FINANCIAL RESULTS

The Board of Directors (the "Board") of China Ground Source Energy Industry Group Limited (the "Company") is pleased to announce the unaudited consolidated results of the Company and its subsidiaries (the "Group") for the three months and six months ended 30 June 2014 together with the unaudited comparative figures for the corresponding periods in 2013 as follows:
